Find Out How **Abacus Backups
Adds the Missing Layer of Security to
Your Disaster Recovery Planning**

Abacus can be combined with your existing tape backup solution for a more comprehensive disaster recovery plan. Abacus is a disaster recovery solution that provides cost-effective business continuity for Microsoft Exchange, Microsoft SQL Server, Oracle, virtual systems, file servers, and many other applications.

Features such as 24x7x365 monitoring, built-in bandwidth control and an unlimited recovery window allows data to be replicated to a remote source, far away from disasters such as hurricanes, tornadoes, and brown-outs. Likewise, data can be restored within minutes.

Our binary patch technology makes it easy to secure, protect and recover critical data, provides platform indepen-

dence, and delivers the most efficient and highest performing disk-to-disk backup and recovery solutions available in the industry today.

Abacus Backups gives its clients a highly secure, compliant and easily managed solution for data online backup. We provide immediate telephone and RDP-based customer support, disaster readiness, and a scalable software-based interface that scales to fit the needs of your enterprise.

With client support teams and secure data centers across North America, learn more about why Abacus is quickly becoming a primary choice amongst the CEO's and CIO's of today's corporate enterprise.

“

**the easiest and
most effective
backup solution
possible**

”
